

Box&Pointer Part 2**Q1.**

double pi = 3.14;

Q2.

int[] arr = new int[3]; arr[1] = 42;

Q3.

class Bar { public int value; public Bar() { value = 100; } }	Bar b1 = new Bar(); Bar b2 = new Bar(); b2 = b1;
--	--

Q4.

class Foo { public int x; public Foo() { x = 0; } }	Foo[] fooArr = new Foo[2]; fooArr[0] = new Foo(); fooArr[1] = fooArr[0]; fooArr[0].x = 20;
--	---

Draw the following boxes and pointer diagrams. Use the following classes:

```
class Ninja {  
    private String name;  
    private int level;  
  
    public Ninja(String name) {  
        this.name = name;  
        this.level = 1;  
    }  
  
    public void setLevel(int level) {  
        this.level = level;  
    }  
}
```

```
class Pirate {  
    private Ninja enemy;  
  
    public Pirate(Ninja n) {  
        this.enemy = n;  
    }  
  
    public Pirate() {  
        this.enemy = new Ninja("Foo");  
    }  
}
```

Q5.

```
Pirate p = new Pirate(null);
```

Q6.

```
String name = "Buffalo";  
Ninja[] ninjas = new Ninja[3];  
for(int i = 0; i < 3; i++) {  
    ninjas[i] = new Ninja(name);  
    ninjas[i].setLevel(i);  
}
```

Q7.

```
Ninja buffalo = new Ninja("Buffalo");  
Ninja[] ninjas = new Ninja[3];  
for(int i = 0; i < 3; i++) {  
    ninjas[i] = buffalo;  
    ninjas[i].setLevel(i);  
}
```
